

Vets All Natural OMEGA BLEND OIL

General Information

Dr Bruce has formulated this specific blend of oils to assist in controlling itchy or flakey skin and improve coat quality and shine. It includes Vitamins A, D, E and Omega 3, 6 and 9.

It produces an exceptional natural shine in the coat and assists in the control of “doggy odour” without the need for regular dog washing.

Although often effective in assisting with skin problems on its own, Omega Blend Oil represents one part Dr Bruce’s Skin Support Protocol.

When combined with Vets All Natural RAW76 Sensitive Skin and Skin and Coat Formula, up to 70% of skin allergy problems can be solved naturally.

Ingredients

Vets All Natural Omega Blend Oil contains 100% pure, cold pressed Flax Seed Oil, Shark Liver Oil, Sunflower Oil, and Wheat Germ Oil and is a potent source of natural Omega 3 and 6 essential fatty acids, Alkyl Glycerol’s, Squalene, antioxidants, and Vitamins A, D, and E.

Flax Seed Oil provides a natural source of Omega 3 essential fatty acids, which are commonly deficient in pets that eat cooked pet foods. Omega 3 essential fatty acids help to maintain health and vitality to the skin and coat

Sunflower oil is a natural source of Omega 6 Essential Fatty Acids, and creates a perfect balance of these two essential fats.

Shark liver oil is a potent source of vitamins A and D. Vitamin A aids in the growth and repair of body tissues, especially the skin, and linings of the mucus membranes, and promotes good eyesight.

Vitamin D is important for growth and maintenance of teeth and bones, for heart function, and normal blood clotting.

Vitamin E from wheat germ oil is a powerful anti-oxidant and free radical scavenger, and can eliminate the oxidative by- products of metabolism that play a role in allergic reactions.

Omega Blend Nutritional Analysis

	Units	per 100g
Energy	kcal	886.7
Total fat	g	100
Total saturated	g	11.53
